Contextualisation

The course Computer Architecture is a mandatory subject of the module Computer Engineering. The course takes place during the first semester of the third year. The course examines current concepts of computer architecture such as computer performance and pipelining, as well as the memory hierarchy and its relationship to performance improvement.

Requirements

Essential requirements

The requirements for this course are the subjects "Estructura de Computadors I" and "Estructura de Computadors II" which are mandatory subjects of previous years of the degree.

Skills

Specific

- * CI203 – Capacity of analysing and evaluating computer architectures, including parallel and distributed platforms as well as developing and optimising software for these platforms..

Generic

- * CTR01 – Capacity of analysis and synthesis, structuring, planning and decision making..

Teaching guide

- * CTR02 – Capacity of critical analysis and capacity for proposing and applying new solutions..
- * CTR03 – Capacity to acquire in an autonomous way new knowledge..
- * CTR04 - Capacity to research for resources and to manage the information in the computing ambit.
- * CTR07 – Capacity to communicate computing concepts orally as well as in writing, in different areas..

Basic

- * You may consult the basic competencies students will have to achieve by the end of the degree at the following address: <http://www.uib.eu/study/grau/Basic-Competences-In-Bachelors-Degree-Studies/>

Content

Theme content

- 1.1 Fundamentals of Quantitative Design and Analysis
 - 1.1 Introduction
 - 1.2 Classes of Computers
 - 1.3 Defining Computer Architecture
 - 1.4 Trends in Technology
 - 1.7 Dependability
 - 1.8 Measuring Performance
 - 1.9 Quantitative Principles of Computer Design
- 2.2 Pipelining
 - 2.1 Overview
 - 2.2 Pipelined datapath and Control
 - 2.3 Data Hazards: Forwarding vs Stalling
 - 2.4 Control Hazards
 - 2.5 Exceptions
 - 2.6 Parallelism via Instructions
3. Large and Fast: Exploiting Memory Hierarchy
 - 3.1 Introduction
 - 3.2 Memory Technologies
 - 3.3 The Basics of Caches
 - 3.4 Measuring and Improving cache performance
 - 3.5 Dependable Memory Hierarchy
 - 3.6 Virtual Machines
 - 3.7 Virtual Memory

3.8 A Common Framework for Memory Hierarchy

Teaching methodology

The subject is explained using lectures, establishing an interactive relationship between teacher and students using examples, solving simple exercises, problems and proposing more complex problems where students can develop the knowledge and skills acquired. The exercises sessions are combined with the more theoretical ones, and give students the opportunity to really confront the problems that arise in the course. The method used consists in proposing various exercises that students must solve. Those will be collectively later corrected or will be corrected by the teacher individually.

In order to encourage autonomy and personal work of the student, the course is part of the Extended Campus, which includes the use of electronic tools to achieve a flexible and distance education. Thus, and using the Moodle platform, students will have a means of online communication and distance with the teacher.

In-class work activities

| Modality | Name | Typ. Grp. | Description | Hours |
|-------------------|-------------------------------|------------------|--|-------|
| Theory classes | Blackboard lectures | Large group (G) | The subject is explained using lectures, establishing an interactive relationship between teacher and students using examples, solving simple exercises, problems and proposing more complex problems where students can develop the knowledge and skills acquired. | 30 |
| Practical classes | Computing Laboratory sessions | Medium group (M) | The sessions and the Computing lab are done using a simulation environment of a pipelined computer. | 14 |
| Practical classes | Solving exercises lectures | Large group (G) | The exercises sessions are combined with the more theoretical ones, and give students the opportunity to really confront the problems that arise in the course. The method used consists in proposing various exercises that students must solve. Those will be collectively later corrected or will be corrected by the teacher individually. | 16 |

At the beginning of the semester a schedule of the subject will be made available to students through the UIBdigital platform. The schedule shall at least include the dates when the continuing assessment tests will be conducted and the hand-in dates for the assignments. In addition, the lecturer shall inform students as to whether the subject work plan will be carried out through the schedule or through another way included in the Campus Extens platform.

Distance education work activities

| Modality | Name | Description | Hours |
|-----------------------|----------------------------------|---|-------|
| Individual self-study | Preparation for the final exam | Self-study to prepare for the final exam. This will be a combination of short answer and long answer questions. | 25 |
| Individual self-study | Preparation for the partial exam | Self-study to prepare for the final exam. This will be a combination of short answer and long answer questions. | 25 |

Teaching guide

| Modality | Name | Description | Hours |
|------------------|-----------------|--|-------|
| Group self-study | Final practicum | Students will carry out a final practice involving the simulation of a pipelined system. | 40 |

Specific risks and protective measures

The learning activities of this course do not entail specific health or safety risks for the students and therefore no special protective measures are needed.

Student learning assessment

Blackboard lectures

| | |
|-------------|---|
| Modality | Theory classes |
| Technique | Observation techniques (non-retrievable) |
| Description | The subject is explained using lectures, establishing an interactive relationship between teacher and students using examples, solving simple exercises, problems and proposing more complex problems where students can develop the knowledge and skills acquired. |

Assessment criteria
Final grade percentage: 5%

Solving exercises lectures

| | |
|-------------|--|
| Modality | Practical classes |
| Technique | Short-answer tests (non-retrievable) |
| Description | The exercises sessions are combined with the more theoretical ones, and give students the opportunity to really confront the problems that arise in the course. The method used consists in proposing various exercises that students must solve. Those will be collectively later corrected or will be corrected by the teacher individually. |

Assessment criteria
Final grade percentage: 5%

Preparation for the final exam

| | |
|-------------|---|
| Modality | Individual self-study |
| Technique | Extended-response, discursive examinations (retrievable) |
| Description | Self-study to prepare for the final exam. This will be a combination of short answer and long answer questions. |

Assessment criteria
Final grade percentage: 45%

Teaching guide

Preparation for the partial exam

| | |
|-------------------------|---|
| Modality | Individual self-study |
| Technique | Short-answer tests (non-retrievable) |
| Description | Self-study to prepare for the final exam. This will be a combination of short answer and long answer questions. |
| Assessment criteria | |
| Final grade percentage: | 20% |

Final practicum

| | |
|-------------------------|--|
| Modality | Group self-study |
| Technique | Student internship dissertation (retrievable) |
| Description | Students will carry out a final practice involving the simulation of a pipelined system. |
| Assessment criteria | |
| Final grade percentage: | 25% |
