Horari d’atenció als alumnes

You need to book a date with the professor in order to attend a tutorial.

Contextualisation

TEACHERS:

Dr. Andreu Palou (Professor of Biochemistry and Molecular Biology, 1987) is the general director of the Laboratory of Molecular Biology, Nutrition and Biotechnology and Nutrigenomics research group at UIB, with 27 researchers. His main research is in the field of molecular nutrition: the regulatory system of body weight (obesity), the relationship between diet and the (epi) genetic (Nutrigenomics and personalized nutrition) mechanisms diet / disease relationship with food or Functional Safety and Efficacy of food, and identification health claims on foods and new biomarkers for European substantiation of health claims in food. He is also a founding member and director of the scientific committee of Alimentomica, first technology-based company at the University of the Balearic Islands.

Dr. Josep Mercader (PhD in Biochemistry, 2008) works at the R+D Department of Alimentómica thanks to a Torres Quevedo contract from the Ministerio de Economía y Competitividad. His main work line at the company is the development of nutrigenetic tests. Previously, he has worked in other companies related with Biomedicine (Stem Center SL) and Hygiene and Food Safety (Preverisk SL, Cristal Iberica Consulting SA). Since 2011, he is an Associate Professor at the Universitat de les Illes Balears. His basic research activity has been in the area of obesity and diabetes at the Laboratory of Molecular Biology, Nutrition and Biotechnology-Nutrigenomics, and at the Institut National de la Santé et de la Recherche Médicale del Hospital Rangueil (Toulouse, Francia), being coauthor of 20 scientific papers.

SUBJECT:

In this module students will have the opportunity to attend to seminars related with the application of the research in nutrigenomics in companies of the food sector. The students will become used to participating in scientific discussions, learn to ask questions, assess the appropriateness of experimental methods used in research, and express their opinion on scientific research, all in the area of nutrigenomics and functional foods and how...
R&D departments in the area work. The training acquired in these seminars will help students to approach other postgraduate subjects, especially "Practical training in food enterprises".

**Learning Outcomes:**

* Discuss implementation strategies in Nutrigenomics research companies in the food sector.
* Summarize the basis or the operation of the R & D of companies in the food sector.
* Develop a business plan in the field of functional foods and nutrigenomics.
* Work effectively as a member of a work team.

**Requirements**

The subject does not have any specific requirement.

**Skills**

The list of the skills related to the subject are listed below.

**Specific**

* Knowing the possibilities of businesses in the field and the role of R&D departments.
* Knowing the latest advances in the field of Nutrigenomics, Personalized Nutrition and Molecular Nutrition and acquire the skills necessary to keep constantly updated.
* Ability to work proficiently in a professional environment related to Nutrigenomics, Personalized Nutrition, Molecular Nutrition and Functional Foods.

**Generic**

* Knowing the field of scientific research and its impact on society.
* Knowing to incorporate scientific advances in their own professional field.
* Being able to integrate knowledge and handle complexity, and formulate judgments based on information that was incomplete or limited, include reflecting on social and ethical responsibilities linked to the application of their knowledge and judgments.
* knowing and understanding the basis or opportunity for originality in developing and / or applying ideas, often within a research context.

**Basic**

* You may consult the basic competencies students will have to achieve by the end of the Master’s degree at the following address: [http://estudis.uib.cat/master/comp_basiques/](http://estudis.uib.cat/master/comp_basiques/)

**Content**

Seminars will be held by specialists in the field of nutrigenomics and functional foods. Students will be able to participate actively in seminars, where the latest innovations in the field will be discussed.

Also, it will be held some introductory lectures on key points on the development of a business plan.
Theme content

Introduction to the subject. Introduction to the subject
* Introduction to the subject
* Business in the field of Nutrigenomics
* Basics key points in the development of a business plan.

Innovation and Development Seminars. Innovation and Development Seminars
Seminars will be held by specialists in the field of nutrigenomics and functional foods.

Teaching methodology

The teaching methodology that will be followed in the subject is listed below.

Workload

The workload estimate in the subject is listed below.

In-class work activities

</table>

At the beginning of the semester a schedule of the subject will be made available to students through the UIBdigital platform. The schedule shall at least include the dates when the continuing assessment tests will be conducted and the hand-in dates for the assignments. In addition, the lecturer shall inform students as to whether the subject work plan will be carried out through the schedule or through another way included in the Campus Extens platform.

Modality | Name | Description | Hours
--- | --- | --- | ---
Individual self-study | Report on the nutrigenomics business companies | Students must submit a report on the description of companies involved in the seminars | 5
Group or individual self-study | Preparation of business plan related to food industry | The students will have to prepare a work on nutrition and food sector in groups of a maximum of 3 people. They will have to develop an idea of business project on the field of Nutrigenomics and Personalized Nutrition and make business plan that will be also presented in class. | 30

Specific risks and protective measures

The learning activities of this course do not entail specific health or safety risks for the students and therefore no special protective measures are needed.

Student learning assessment

Evaluation will take into account:

**Oral presentation of a business plan related to food industry**

<table>

Teaching guide

**Academic year**: 2016-17  
**Subject**: 10285 - Innovation and Development  
**Seminars**  
**Group**: Group 1, AN  
**Teaching guide**: D  
**Language**: English

---

**Report on the nutrigenomics business companies**

**Modality**: Individual self-study  
**Technique**: Student internship dissertation (retrievable)  
**Description**: Students must submit a report on the description of companies involved in the seminars.  
**Assessment criteria**: Quality of the report.

Final grade percentage: 0% for the training plan A  
Final grade percentage: 25% for the training plan B

---

**Preparation of business plan related to food industry**

**Modality**: Group or individual self-study  
**Technique**: Papers and projects (retrievable)  
**Description**: The students will have to prepare a work on nutrition and food sector in groups of a maximum of 3 people. They will have to develop an idea of business project on the field of Nutrigenomics and Personalized Nutrition and make business plan that will be also presented in class.  
**Assessment criteria**: It will be positively valued the structure and organization of the presented business project, its novelty, applicability, viability and expectation of success. It will be also valued the suitability of the project to the matter of the Master.

Final grade percentage: 60% for the training plan A  
Final grade percentage: 60% for the training plan B

---

**Resources, bibliography and additional documentation**

Given the peculiarities of the subject and the way in which this is planned, there is no textbook. The characteristics of the bibliography are commented below.

**Basic bibliography**

All relevant bibliography, mainly international journal articles and online scientific databases, related to research in the area of nutrigenomics and functional foods, as well as related to the specific matter chosen by the students to develop their business project. Given that the subject area is constantly updated, students will be handed an updated bibliography of main revisions dealt with during the course of the subject.

**Other resources**
